

# Arduino On / There should be nothing on the load

Main Page

Sub page of Main Page

Access Sus-Page

Move submenu using rotary switch, Enter D value using rotary,  
Move main page using rotary switch.  
When moving the main page using the rotary switch, the value  
is automatically stored in the EEPROM.

## Second Page

DISTANCE CG 1000  
DISTANCE WHEEL TO CG

\_\_\_\_\_

WHEEL CG SETUP

DISTANCE CG 1000

## Sub page of Second Page

DISTANCE CG 1000  
ROTARY CONTROL ON PAGE

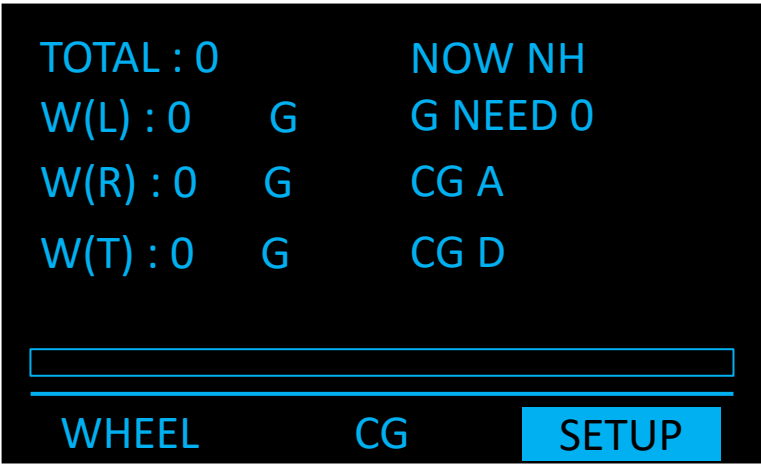

\_\_\_\_\_

VALUE 1000

Access Sus-Page

Move submenu using rotary switch, Enter CG value using rotary,  
Move main page using rotary switch.  
When moving the Second page using the rotary switch, the  
value is automatically stored in the EEPROM.

TOTAL : 0	Total weight / Unit g
W(L) : G	Left wheel weight/ Unit g
W(R) : G	Right wheel weight / Unit g
W(T) : G	Tail wheel weight / Unit g
NOW NH	If the Head is heavy (Tail Light)
NOW TH	If the Tail is heavy (Head Light)
NEED 0	Weight required for Valence
CG A	Current CG location
CG D	Distance difference from CG entered
